WHERE STYLE MEETS FUNCTION

Form, Function, and a Whole Lot of Flair

Louvers were once about airflow. Today, they're about creating an atmosphere. Metaldhara Louvers enhance everyday experiences through smart design. In balconies, they become privacy guardians and shade creators. Indoors, they segment space without building walls. And wherever they go, they lift design from plain to powerful.

Design That Works Harder:

Whether you're designing a sleek home or a statement commercial space, Metaldhara lets you fine-tune every detail.

- Go vertical for clean, rhythmic facades that feel effortlessly modern
- Try horizontal layering to open up your space with ease
- Play with alternating patterns to add a touch of visual drama
- Mix finishes for a bold look that's uniquely yours
- Customise spacing and angles to create a signature that only you can own

For interiors that think like you do

Your spaces don't just look good; they work beautifully, too.

- Let in air without giving up privacy
- Filter harsh sunlight, not your view
- Define spaces without boxing them in
- Reduce ambient noise without losing design flair
- Stay open, yet subtly separated, just the way you want

From Gates to Ceilings- Louvers That Do It All

Versatility is the soul of good design. Whether it’s a luxury home or a commercial landmark, Metaldhara ACP Louvers adapt with ease. It elevates surfaces with a seamless blend of texture, tone, and performance.

Use them on gates for a high-end wood look that requires no sanding or staining. Let canopies wear an earthy tone that's warm but light. Design fencing that offers privacy without heaviness. Bring roof cladding to life as a standout architectural element or turn interior walls and ceilings into tactile, layered compositions. Metaldhara adapts to your space and your imagination.

The Metaldhara Edge

Built Like a Pro. Styled Like a Dream.

Backed by Aludecor's legacy of innovation, Metaldhara Louvers bring you more than just good looks. They're built on two decades of engineering excellence and a future-ready mindset that constantly raises the bar.

As India's first ACP manufacturer with a NABL-accredited Fire Retardant Lab, and the only brand with an in-house palletising line for FR granule production, Aludecor ensures that each panel offers superior safety, consistency, and quality. With a production capacity of over 9.6 million sq. m, presence in more than 250 cities, and over 500 shade options, Aludecor makes innovation widely accessible. Metaldhara is crafted from the same future-ready ecosystem.

You'll find our craftsmanship in more than 2 lakh projects across India and beyond. Each one is a testament to the durability and design appeal of our solutions. We were also the first to introduce aluminium coil coating in India, pioneering innovations that others now follow.

The Benefits in Brief:

- Lightweight Yet Strong – Easy to handle, with high structural performance
- Weatherproof & Thermally Insulated – Performs in all seasons, reducing energy costs
- Durable & Low Maintenance – No warping, rotting, or frequent upkeep required
- Sustainable & Cost-Effective – Recyclable, eco-friendly, and built with a significantly low carbon footprint
- Resistant to insect attacks for long lasting performance

Why Choose ACP Louvers Over Traditional Materials?

Wood warps. Metaldhara stays true.

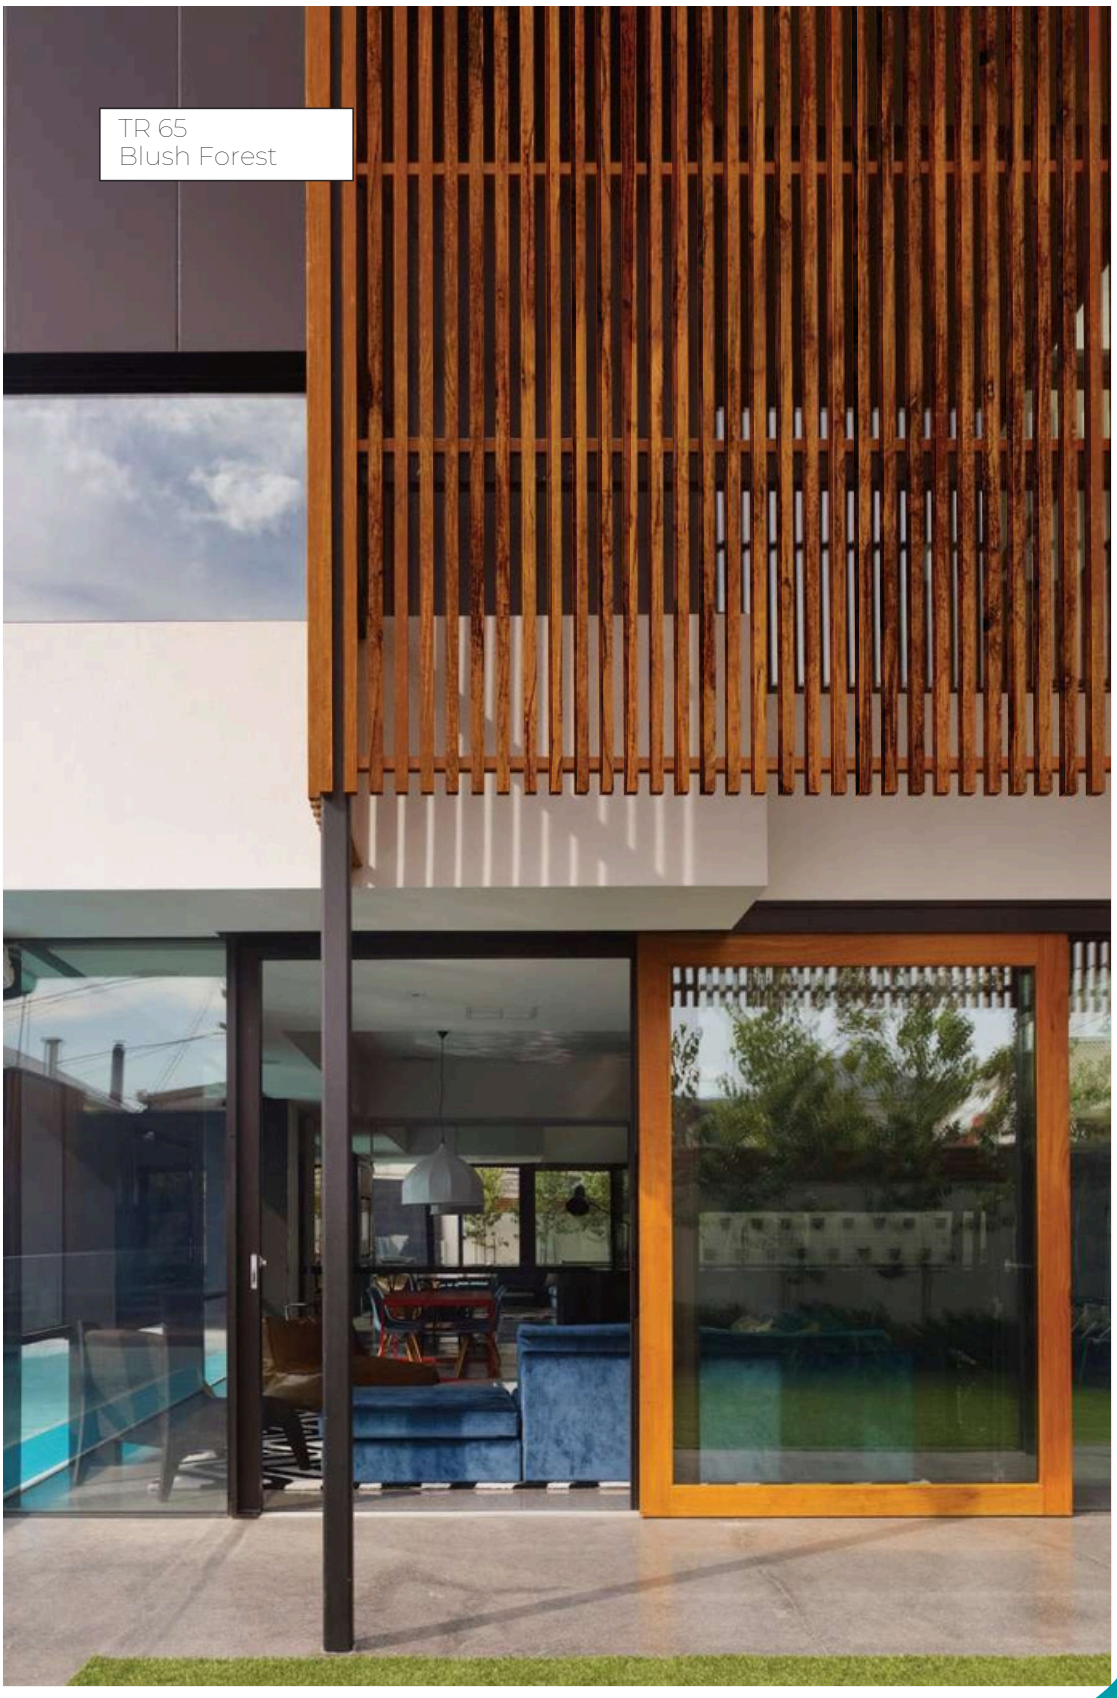

Metal rusts. Metaldhara resists.

Clay erodes. Metaldhara endures.

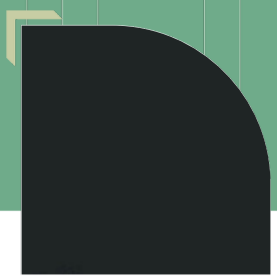

MDF swells in humidity. Metaldhara stays intact.

YOUR GUIDE	
DO'S ✓	**DON'TS** ✗
Understand product specs and types	Don't use the same method for all ACPs
Check weather and environmental factors	Don't ignore weather conditions
Ensure proper ventilation	Don't skip or block airflow
Measurement & marking needs to be done accurately	Don't install on uneven surfaces
Use proper, high-quality fasteners	Don't use poor-quality or mismatched hardware
Regular cleaning and inspection	Don't neglect or delay maintenance
Ensure installers are trained	Don't ignore training
Follow all installation guidelines and manufacturer instructions	Don't ignore guidelines or safety protocols

• For shade details refer to page (Triline-29/30))
